The World Library of Toxicology, Chemical Safety, and Environmental Health (WLT)

- online, web-based portal containing links to digital global information resources
- allows all experts to contribute to a “borderless data depository” to promote environmental and human health
- uses Wiki based Web 2.0 technology, supported by Toxipedia (http://www.toxipedia.org) to encourage scientists and public health professionals from around the world to share toxicological information
- a joint project of the International Union of Toxicology, the National Library of Medicine, the Institute of Neurotoxicology & Neurological Disorders, and Toxipedia
- includes native and English language links or resource names
- Country Correspondents and review committees have exclusive access to easily and securely create, update and edit content; operates on a global scale compiling information on over 55 of the approximately 200 countries in the world

Participate! Become a WLT Country Correspondent or review committee member.
